Bachelor of Science in Information Technology

Carlos Hilado Memorial State University
2022-2026

Tech Stack & Skills

Frontend

- HTML5
- CSS3
- JavaScript
- React
- Next.js
- Vue.js
- Tailwind CSS
- Bootstrap

Backend

- PHP
- Laravel

Database

- MySQL
- PostgreSQL

BaaS

- Supabase
- Firebase

Version Control

- Git
- GitHub

UI/UX & Design

- Figma
- Adobe XD
- Canva
- Responsive Web Design
- Wireframing & Prototyping

Software Development

- Object-Oriented Programming (OOP)
- MVC Architecture
- CRUD Application Development
- Database Design
- System Analysis & Design
- Software Testing & Debugging

Additional Skills

- Web Application Development
- Full-Stack Development
- API Integration
- Authentication & Authorization
- Problem Solving
- Technical Documentation
- Team Collaboration
- Agile Development Concepts

Aspiring software and web developer with a passion for building efficient, user-friendly, and scalable applications. Skilled in web development, database management, UI/UX design, and modern development technologies, with a strong commitment to continuous learning and innovation.

Deployed Projects:

2025 - Carlos Hilado Memorial State University - Alijis

CHMSU: AGRM (Carlos Hilado Memorial State University: Integrated Online Platform for Academic Grade and Report Management)

Stack & Integrations: PHP · MySQL · Tailwind CSS v3 · Flowbite · JavaScript · AJAX · TCPDF · PhpSpreadsheet · PHPMailer · html5-qrcode · Chart.js · SheetJS (xlsx)

- A comprehensive academic management system was built for Carlos Hilado Memorial State University to centralize and streamline institutional data. The platform supports three distinct user roles: administrators, faculty, and students, each with a tailored dashboard and access level. Administrators manage students, faculty profiles, course enrollments, academic programs, sections, and grading periods. Faculty members encode and manage grades across multiple grading components such as assessments, exams, participation, projects, and term grades, with automatic computation. Students can view their academic records, monitor enrollment status, and track grades in real time. The system also features QR-based attendance scanning, where faculty generate QR codes per session and students scan them using a device camera for instant attendance logging. Automated email notifications handle enrollment confirmations, signup verifications, and password resets. Data can be exported as formatted PDF reports and Excel spreadsheets for institutional reporting.

2026 - Provincial Government of Negros Occidental (General Services Office - Property Management Division)

PGSO - ULPMMS (Provincial General Services Office - Unified Lot and Property Management and Monitoring System)

Stack & Integrations: PHP · MySQL · Tailwind CSS v3 · Flowbite · JavaScript · AJAX · Leaflet.js · PhpSpreadsheet · Chart.js · SheetJS (xlsx)

- A provincial-scale digital platform was developed for the Provincial General Services Office of Negros Occidental to manage and monitor government housing lots and property assets. The system is divided into two modules: Lot Management and Property Management, both operating under a unified authentication and user management layer. Key features include awardee and beneficiary tracking, lot and location assignment, payment recording and monitoring with support for multiple payment methods, document management with categorized file uploads, and duplicate transaction detection. Geographic boundary mapping is integrated using Leaflet.js, enabling administrators to visually plot and view lot boundaries and locations on an interactive map. The platform also provides dashboard analytics with charts, Excel import/export for bulk data operations, and print-ready reports for official documentation.

Others:

- Volunteering Management System
- QR-Code Based Memorandum Distribution System
- Capstone Archive Management System
- Patient Appointment System
